

CUDA warp: confronto tra layout row-major e column-major

M=16384, N=16384, P=1, BLOCK=128, precisione=double · 20 ripetizioni · throughput basato sul tempo medio

Speedup = GFLOP/s column-major / GFLOP/s row-major. CV massimo: row-major=0.63%, column-major=0.67%.
